TRACKING PLATFORMS I WORK WITH

Data pulled through each platform's API

- Wialon (Gurtam)
- MiX Telematics (MiX by Powerfleet)
- Howen VSS video telematics

+ other API-enabled platforms: Geotab · Navixy · GPSGate · Traccar · flespi · Teltonika devices · Custom GPS feeds

NAIROBI, KENYA · ON-SITE & REMOTE

Fleet intelligence, integrations & software for businesses that *move*.

I help transport and logistics companies turn GPS, telematics, video, and fuel data into clear decisions, connect it to their ERP and business systems, and build the software that puts it to work.

3+
Telematics platforms integrated

Years in data & software

50+
Projects delivered

Problems I help fleets solve

Fuel loss & siphoning alerts
Match tank-level drops against geofences and stops to flag unexplained fuel drains, with a clear record of every incident.

Turnaround time (TAT) analytics
Measure depot queuing, loading, and offloading times so dispatch can plan better and trucks spend less time idle.

Driver safety scorecards
Speeding, harsh braking, over-revving, night driving, and VSS video alarms turned into scorecards for coaching and client safety (HSE) reviews.

Delivery reconciliation & exceptions
Compare trips with delivery records and turn late deliveries and unauthorised stops into documented, actionable incidents.

Automated compliance reporting
Daily, weekly, and monthly reports that support client contracts and regulatory tracking requirements, without manual exports.

Telematics & system integration
Wialon, MiX Telematics, and Howen VSS data combined through their APIs into one dashboard, web portal, or ERP your team already uses.

Who I work with: Fuel & petroleum transporters · Haulage & trucking companies · Distribution fleets · Tracking installers & resellers

What you receive

- **Daily exception report** — Stops, drains & delays flagged
- **Driver scorecards** — Ranked weekly for coaching
- **Fuel reconciliation** — Fillings vs. drains vs. distance
- **Live ops dashboard** — All platforms, one view

SERVICES

02

Integrations, APIs, consultancy & software

One partner for the data, the integrations, and the software that delivers them, from connecting your tracking platform to your ERP to documenting the APIs your partners rely on.

ERP integration with tracking platforms

Sync trips, mileage, fuel, driver hours, and asset status from your tracking platform into your ERP automatically.

- Odoo, SAP, Dynamics, Sage, ERPNext
- Trip costing, billing & fuel accounts
- Mileage-based maintenance jobs

API development & integration

Secure APIs, webhooks, and middleware that move data reliably between your systems.

- Wialon, MiX & VSS API connectors
- REST APIs, webhooks & scheduled syncs
- M-Pesa (Daraja), SMS & email alerts

API documentation

Clear documentation that lets clients, partners, and developers integrate without endless calls.

- OpenAPI / Swagger specifications
- Postman collections & examples
- Integration guides & developer portals

Fleet analytics & dashboards

Fuel, TAT, safety, and utilisation insights from all your platforms in one place.

- Power BI & custom web dashboards
- Scheduled exception reports
- Python & SQL data pipelines

Technology & data consultancy

Independent advice before you spend: what to track, which platform to use, and how to report it.

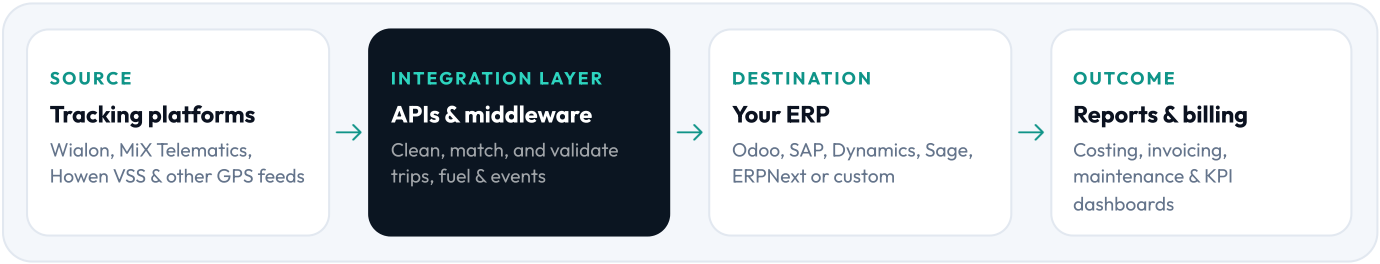

- Telematics platform & data audits
- Integration architecture & roadmaps
- KPI and reporting design

Web & software development

Websites, client portals, and internal systems built around how your team works.

- Company websites & client portals
- Fleet, inventory & operations apps
- Next.js, React, Python & Postgres

How an ERP integration works

FOR TRANSPORT & LOGISTICS COMPANIES

Begin with a Fleet Operations Diagnostic

Share an authorised sample of trip logs, fuel data, or delivery timestamps. I'll return a short report on your operational blind spots and where better data and integration could add value, before you commit to a larger build.

1. **Discovery call** — 15 minutes on your fleet, platforms, and pain points.
2. **Data sample** — A limited, authorised extract of trips, fuel, or deliveries.
3. **Diagnostic report** — Clear findings on exceptions, delays, and reporting gaps.
4. **Pilot & rollout** — A focused solution, measured against your own numbers.

LET'S WORK TOGETHER

Let's talk about your fleet, integration, or next build.

Book a 15-minute discovery call. Payments run on clear milestones, with hosting and licences billed separately.

Fixed-scope projects · Monthly retainers · Consultancy sessions
